

## Materi 2 Menggunakan variable dan tipe data di JAVA

```
public class MyClass {  
    public static void main(String[] args) {  
        String firstName = "John ";  
        String lastName = "Doe";  
        String fullName = firstName + lastName;  
        System.out.println(fullName);  
    }  
}
```

Ketika dijalankan hasilnya

```
John Doe
```

```
public class MyClass {  
    public static void main(String[] args) {  
        int myNum = 5;           // integer (whole number)  
        float myFloatNum = 5.99f; // floating point number  
        char myLetter = 'D';     // character  
        boolean myBool = true;   // boolean  
        String myText = "Hello"; // String  
        System.out.println(myNum);  
        System.out.println(myFloatNum);  
        System.out.println(myLetter);  
        System.out.println(myBool);  
        System.out.println(myText);  
    }  
}
```

Ketika dijalankan hasilnya

```
5  
5.99  
D  
true  
Hello
```
